

Module 8 Assignment:
Name: Siddhant Kumar
Gmail:siddhant8796@gmail.com

Task 1:

Problem Statement

Write code to position 5 equal-sized (50 X 50px) boxes A, B, C, D, and E as follows,

1. box A 200px from the left, and 200px from the top of the viewport.
2. box B -30px left, and -30px above from the center of box A.
3. box C -30px right, and -30px above from the center of box A.
4. box D -30px left, and -30px below from the center of box A.
5. box E -30px right, and -30px below from the center of box A.

Expected Output

Ans) [Answer 1](#)

Task 2

Problem Statement

Explain the difference between absolute and relative position.

Ans)

- Relative: Moves element, doesn't break flow.
- Absolute: Positioned relative to ancestor, breaks flow.

Task 3:

Problem Statement

Create a card as shown in the picture below. (You can use CSS float property only for layout).

Expected Output

Ans) [Answer 3](#)

Task 4:

Problem Statement

Create a simple header that sticks to the top of a webpage upon scrolling.

Expected Output

Ans) [Answer 4](#)

Task 5

Explain the z-index, with a code example.

Ans) The z-index in CSS controls the **stacking order** of overlapping elements. An element with a higher z-index will appear **in front** of elements with a lower z-index. It only works on elements that have a position value other than static (e.g., relative, absolute, fixed, or sticky).

[Code Exmample.](#)
