

Module 9 – Assignment

Q1) Describe the main differences between the CSS Flexbox layout model and the CSS Grid layout model. When would you choose to use one over the other?

Ans)

Feature	Flexbox	Grid
Layout direction	One-dimensional (either row or column)	Two-dimensional (rows and columns)
Main use case	Aligning items in a single axis (horizontal/vertical)	Creating entire layouts with rows and columns
Parent-child relation	Applies to flex container and its immediate children	Applies to the entire layout , controlling both dimensions
Item alignment	Easy to align items along main and cross axes	Precise placement in grid cells with rows and columns
Content size	Better for content-based sizing	Better for fixed and responsive layouts
Overlapping elements	Not supported	Supports overlapping with z-index or grid-area
Gap support	Supported in newer browsers	Fully supported
Order control	User order Property	Use grid-row, grid-column, grid-area

Q2) Explain the role of the following key properties in the Flexbox layout model;

1. Justify-content:

Aligns individual items along the main axis within their alignment container.
Possible values: **auto**, **normal**, **start**, **end**, **center**, **stretch**.
Influences the distribution of space around content items.

2. align-item

Aligns flex items along the cross-axis.
Possible values: **stretch**, **center**, **flex-start**, **flex-end**.
The default value is **stretch**.

3. Gap

Sets the spacing between items in a flex container.
Can be defined for rows (**row-gap**) and columns (**column-gap**), or both (**gap**).
Useful for creating consistent spacing without margins.

4. flex-direction

5. Sets the spacing between items in a flex container.
6. Can be defined for rows (**row-gap**) and columns (**column-gap**), or both (**gap**).
7. Useful for creating consistent spacing without margins.

8. flex-wrap

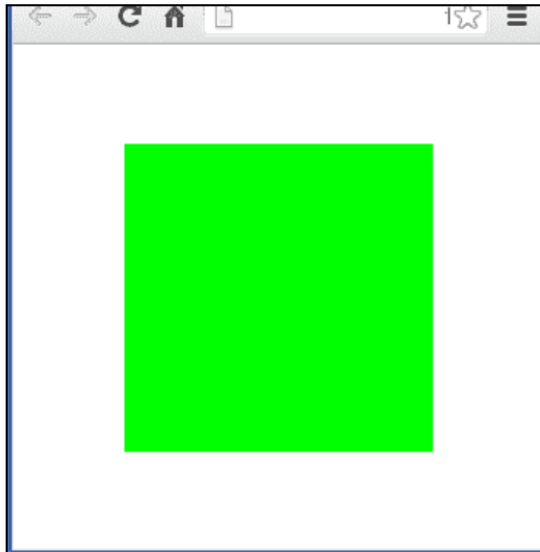

Sets the spacing between items in a flex container.

Can be defined for rows (row-gap) and columns (column-gap), or both (gap).

Useful for creating consistent spacing without margins.

Q3. Write the code to center a div using CSS Flexbox.

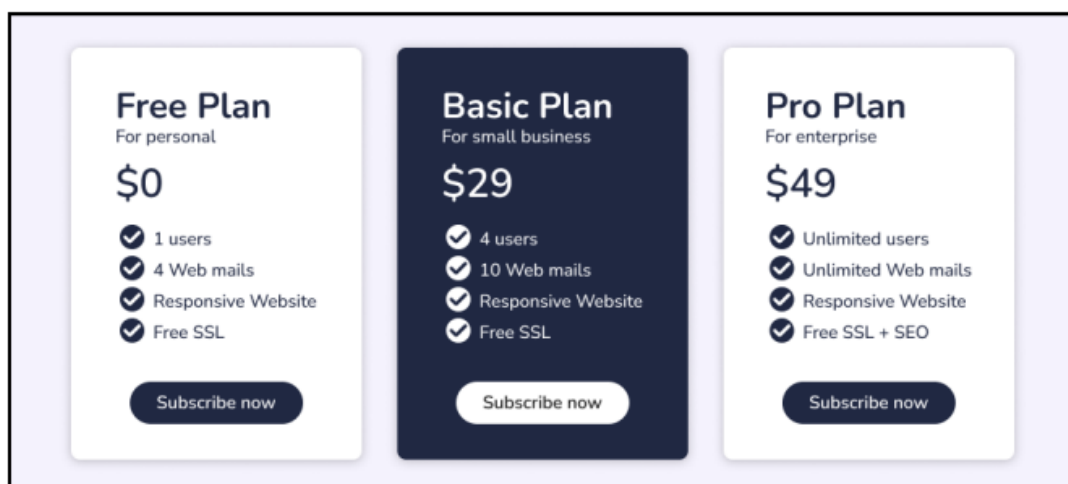

Reference Image given below.

Ans) [Answer 3](#)

Q4. A client of yours wants to add a pricing section on their website to showcase their newly introduced premium plans.

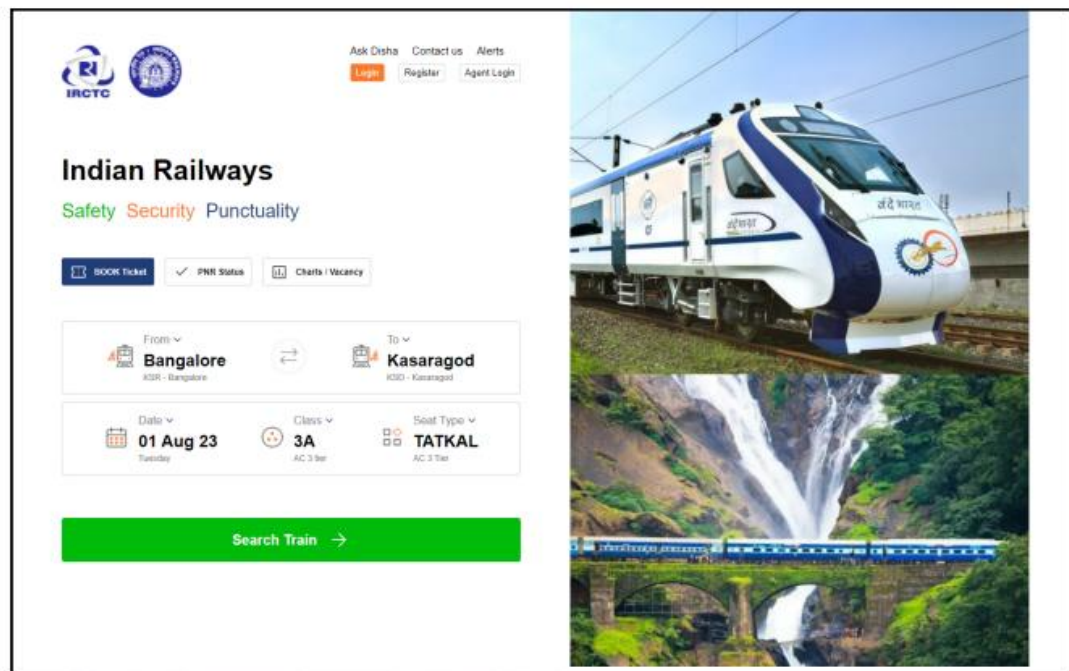

You have to build the pricing section for their business. They have provided you with the figma design for the same. [Link](#)

Ans) [Answer 4](#)

Name: Siddhant Kumar
Gmail:siddhant8796@gmail.com

Q5. build a clone of the IRCTC Ticket booking page.

Assets can be downloaded from the figma file provided below

Ans) [Answer 5](#)
