

Assignment: Module 10

Question1)

Create an image gallery using a CSS grid.

Expected Behaviour

Answer) [Answer 1](#)

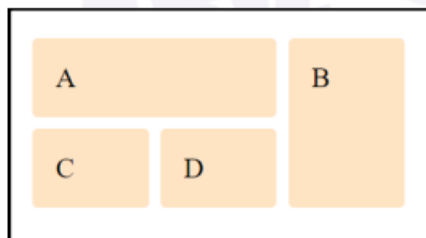

Question 2)

Task 2:

Problem Statement

Write code to arrange containers with texts A, B, C, and D as shown in the below image.

Expected Output

Answer) [Answer 2](#)

Question3) Explain the use of grid-auto-row and grid-auto-column using code examples.?

- **grid-auto-rows:** Sets the size of rows that are not explicitly defined in grid-template-rows.
- **grid-auto-columns:** Sets the size of columns that are not explicitly defined in grid-template-columns.

“CSS

```
.containerAutoColumn
{
  grid-template-columns: 30px 30px;
  grid-auto-columns:50px;
```

```

    }
    .containerAutoRow
    {
        grid-template-columns: 40px 40px;
        grid-auto-columns:80px;
    }
}

```

Question 4)

Task 4:

Problem Statement

Write CSS to show numbers as shown in the figure, without altering the below html code.

Full Stack Web Development

Assignment Question

```

<div class="container">
  <div class="box box1">1</div>
  <div class="box box2">2</div>
  <div class="box box3">3</div>
  <div class="box box4">4</div>
  <div class="box box5">5</div>
  <div class="box box6">6</div>
  <div class="box box7">7</div>
  <div class="box box8">8</div>
</div>

```

Expected Output

Answer) [Answer 4](#)

Question 5) Explain the difference between justify-items and justify-self using code examples.

Ans)

justify-items

- Used on the **grid container**.
- Sets how **all items** in the grid are aligned along the **row axis (inline axis)** (horizontally by default).
- It is a **shorthand** for setting justify-self on all child items.

Values: start, end, center, stretch (default is stretch)

Code.

“html

```

    <style>
.grid-container {
    display: grid;
    grid-template-columns: 100px 100px;
    justify-items: center; /* affects all items */
    gap: 10px;
    border: 2px solid black;
}

```

```
.grid-item {  
  background-color: lightblue;  
  width: 50px;  
  height: 50px;  
}  
</style>
```

```
<div class="grid-container">  
  <div class="grid-item">1</div>  
  <div class="grid-item">2</div>  
</div>  
"
```

justify-self

- Used on **individual grid items**.
- Sets how a **specific item** is aligned along the **row axis** (horizontally).

Code

```
<style>  
.grid-container {  
  display: grid;  
  grid-template-columns: 100px 100px;  
  gap: 10px;  
  border: 2px solid black;  
}  
  
.item1 {  
  background-color: lightgreen;  
  width: 50px;  
  height: 50px;  
  justify-self: start; /* aligns to left of the cell */  
}  
  
.item2 {  
  background-color: lightcoral;  
  width: 50px;  
  height: 50px;  
  justify-self: end; /* aligns to right of the cell */  
}  
</style>  
  
<div class="grid-container">  
  <div class="item1">1</div>  
  <div class="item2">2</div>  
</div>
```
